PHOSPHATASE TEST – NEOGEN ACCUPOINT ADVANCED ALKALINE

PHOSPHATASE IMS # 28d

[Unless otherwise stated all tolerances are ±5%]

SAMPLES

1. Laboratory Requirements (See Cultural Procedures [CP] items 33 & 34) [See current version of M-a-98 to determine if this test method has been approved for use on the specific dairy product]

APPARATUS

2. See CP items 1 - 32 (as necessary)

a. Unless otherwise states, "shake vigorously" refers to standard microbiological mixing, i.e., 25 times in a 1 foot arc in 7 sec or vortex for 10 sec at maximum setting (subsamples/controls in an appropriate container for vortexing)

3. AccuPoint Advanced Reader

	a.	Operating manual available
--	----	----------------------------

- b. Reader serial number: _____
- c. On-screen Product Definitions:
 - 1. Whl Milk Whole milk
 - 2. 2% milk 2% milk fat
 - 3. 1% milk 1% milk fat
 - 4. Skim Skim milk
 - 5. LactFree Lactose free or reduced milk (testing not required per M-a-98)
 - 6. StbryMlk Strawberry milk (all fat levels)
 - 7. ChocMlk Chocolate milk (all fat levels)
 - 8. HalfHalf Half and Half
 - 9. Hvy Crm Heavy Cream

4. Pipettors and Pipets

- a. Fixed volume or electronic, 1.0 mL
- b. Calibration checked as specified in CP item 6.e; maintain records
- c. Disposable, 10 mL (ASTM) pipet with 0.1 mL graduations

5. Vortex Mixer

6. Water Bath, circulating, 34±1°C and 63±1°C (or 66±1°if fat >10%) (Confirmation Procedures)

7. Test tubes (if lab runs Chocolate milk, Half and Half or Heavy Cream)

	a.	Size appropriate for 1:1 dilution
8.	Han	dling and Storage
	a.	Kit contains Samplers (testing devices) and Lyophilized Positive Calibrators
		Kit Lot # Rcd. Date: Exp. Date:
		Lyophilized Calibrator Lot # Exp. Date:
	b.	Reagents stored at 0.0 - 4.5°C until expiration date
	C.	Samplers (testing devices) must be at room temperature at time of use
		CONTROLS
9.	Neg	ative Calibrator/Control
	a.	Prepare at least 20 mL of negative sample for use as a Negative Calibrator/Control and to rehydrate the 350 mU/L Positive Calibrator
		1. Heat a sample of product to 95-100°C for 2 min with stirring
		a. Cool rapidly in an ice bath and hold at 0.0-4.5°C
	b.	Chocolate milk, Half and Half and Heavy Cream are diluted 1:1 with deionized (DI) or MS water prior to testing. All other products are tested undiluted
	C.	Store at 0.0-4.5°C, the Negative Calibrator/Control may be used for up to 48 hours
	d.	Or, aliquot 5.0 mL quantities into small tubes within 24 hours, seal and freeze at -15°C or colder in a non-frost-free freezer, or place in an insulated foam container in a frost-free freezer. Use within 2 months
		Lab Prep. Date: Lab Exp. Date:
		1. Thaw at room temperature
		2. Store at 0.0-4.5°C and use within 48 hours. Do not re-freeze
10.	Pos	itive 350 mU/L Calibrator
	a.	Add 2.0 mL of Negative Calibrator/Control (item 9) to the calibrator vial. Cap the vial and vortex for 15 sec on high to solubilize the lyophilized material
	b.	Hold at 0.0-4.5°C for 5 minutes

- c. Vortex again for 15 seconds
- d. Store are 0.0-4.5°C, the Positive Calibrator may be used for up to 48 hours

11. Positive Control

- a. For all products except Chocolate milk, Half and Half and Heavy Cream, the Positive Calibrator (item 10) is the Positive Control
- b. For Chocolate milk, Half and Half, and Heavy Cream the Positive Control is made by adding another 2.0 mL of Negative Calibrator/Control (item 9) to the 2.0 mL of Positive Calibrator (item 10), cap and vortex for 15 sec. [The 1:1 dilution is required to account for the dilution factor used for these products]

CALIBRATION

12. Calibrate reader with each new lot for each product type to be tested

- a. Prepare a Negative Calibrator/Control and a Positive Calibrator as described in items 9 and 10
- b. Negative Calibrator Procedure
 - 1. Scroll to the line below Calibration that lists product definitions (item 3.c)
 - 2. Select the product to calibrate by pressing OK so the outline box turns red
 - 3. Navigate to the "product definition" 0-zero for the product type being calibrated and press the OK. The outline box turns blue (for example: WhI Milk 0 with a blue outline box)
 - 4. Test the control following test procedure (item 14.d i)
- c. Positive Calibrator Procedure
 - 1. Scroll to the line below Calibration that lists product definitions (item 3c.)
 - 2. Select the product to calibrate by pressing OK. The outline box turns red
 - 3. Navigate to the "product definition" 350 for the product type being calibrated and press the OK. The outline box turns blue (for example: WhI Milk 350 with a blue outline box)
 - 4. Test the control following test procedure (item 14.d i)
- d. Verify the Calibration
 - 1. Scroll the Reader to line labeled Calibration
 - 2. Press the OK button to change the outline box to red

- 3. Navigate to the line labeled Sample and press OK to change the outline box to blue
- 4. Scroll down to select the product that was just calibrated and press OK. The outline box is blue
- Retest the Negative Calibrator/Control (item 9) following test procedure (item 14.d - i)
- For all products except Chocolate Milk, Half-and-Half and Heavy Cream, retest the Positive Calibrator (item 10) following test procedure (item 14.d - i)
 - For Chocolate Milk, Half-and-Half, and Heavy Cream add another 2.0 mL of Negative Calibrator/Control to the 2.0 mL of Positive Calibrator (item 10), cap and vortex for 15 sec. Test following the test procedure (item 14.d – i) [The 1:1 dilution is required to account for the dilution factor used for these products.]
- 7. Performance of negative must be <30 mU/L and positive must be in the range (250 500 mU/L)
- 8. If not within range, repeat starting from 12.b

DAILY PERFORMANCE CHECKS

13. Daily test of a Negative Control (item 9) and Positive Control (item 11)

- a. Test the Negative Calibrator/Control (item 9) following test procedure (item 14.b i). Control must be ≤30 mU/L
- b. Test the Positive Control appropriate for the product type (item 11 a or b) following test procedure (item 14.b i). Control must be 250 500 mU/L

TEST PROCEDURE

14. Test Procedure

- a. Prepare Sample
 - 1. Mix retail milk samples by inverting containers top to bottom, then bottom to top (a complete half circle or 180 degrees) without pausing, 25 times; use within 3 min
 - For subsamples of retail milk containers or controls, mix by shaking 25 times in 7 sec with a 1 ft movement or vortex at least 15 sec at maximum setting; (subsamples in appropriate containers to allow the use of vortexing) use within 3 min

		3.	Cho deio	ocolate milk, Half and Half and Heavy Cream are diluted 1:1 with onized or MS water prior to testing	
			a.	Use a minimum of 10 mL of sample + 10 mL of water	
			b.	Add 1.0 mL of diluted sample into a 2 mL centrifuge tube	
	b.	On pres with	the A ss the n a blu	accuPoint Advanced Alk Phos assay screen, scroll to the 2 nd line and e ok button. Navigate down to Sample and press the button so Sample ue outline box is shown	
	C.	Scr pres	oll to ss the	the 3 rd line, press the ok button, scroll to the product description and e ok button so the product with a blue outline box is shown	
	d.	Ver	ify AL	P sampler (testing device) stored at room temperature	
	e.	Pull floc floc bac dev dev reag	l the f ked p ked h k in tl ice) h ice) r	flocked handle from sampler (testing device) and submerge the portion into the sample (item 14.a) or control (items 9 or 11). Swirl the handle in the sample for 3 seconds and then place the flocked handle he sampler (testing device) and push the top of the sampler (testing handle until the flocked portion is submerged in sampler (testing eagent. Immediately shake vigorously for 10 seconds keeping the in the tip of the sample	
	f.	Witl left the	hin 10 side (lid	D seconds, open the lid on the Reader by pressing the button on the of the reader. Insert sampler (testing device) into the reader and close	
	g.	The coll or r	e read ect da emov	ler will show a magnifying glass at the bottom of the screen and will ata for the sample for the next 2 minutes. Do not open the reader lid re the sampler (testing device) during this time	
	h.	Nea and resp	ar the I then conse	end of the data collection period a red bar will advance on the screen the reading in RLU for calibrations and the reader converts the to mU/L for samples which will be displayed on the screen	
	i.	Rer nex	nove t sam	the sample, close reader door while not in use, and prepare for the pple	
	j.	Sar test	nples ed fo	with ≥ 350 mU/L of ALP activity are suspect positive and must be r microbial, and reactivated phosphatase (Sections 15 & 16)	
				CONFIRMATION	
15.	Mic	robia	al Pho	osphatase	
	a.	Hea 10 r	at 1.0 min	mL of suspect sample at 63±1°C for 30 min, stirring or mixing every	
		1.	lf fa	t content is >10%, heat at 66±1°C for 30 min	
	b.	Coc	ol san	nple rapidly to 0-4.5°C in an ice bath	

d. Test heated sample and unheated sample (original sample) following item 14 e. Interpretation 1. Controls test as specified in item 13 2. If heated and unheated sample have equal activity (±30%, mU/L or RLU) the sample is regarded Not Found for residual phosphatase, the activity originally measured is microbial 3. If the heated sample is more than 30% below unheated sample (mU/L or RLU), the sample contains milk phosphatase activity, either residual or Reactivated 16. Reactivated Phosphatase a. Magnesium acetate solution commercially available b. Or, prepared in laboratory 1. Dissolve 35.4 g of Mg acetate tetra-hydrate, Mg (CzHsOz)z*4Hz0 in 25 mL deionized (DI) water, warming slightly to aid dissolution 2. Pour solution into 100 mL volumetric flask, rinse original container several times and add rinse to flask 3. After cooling to room temperature, make up to 100 mL (stable for 1 year at 0.0-4.5°C) c. Procedure 1. Label separate test tubes as "Blank" and "Test" 2. Add a 5.0 mL aliquot of sample (unheated, original sample prepared as in 14a) to each test tube 3. Add 0.1 mL DI water to the sample labeled "Blank", and 0.1 mL Mg acetate solution to the sample labeled "Test" 4. Cap tubes, mix and heat both aliquots for 1 hour at 34±1°C 5. Remove samples from water bath and cool rapidly to 0.0 – 4.5°C in an ice bath 6. Dilute 1 mL of sample containing magnesium acetate (Test) with 5 mL (15 dilution) of negative control		C.	Test	t positive and negative controls following item 13	
 e. Interpretation 1. Controls test as specified in item 13 2. If heated and unheated sample have equal activity (±30%, mU/L or RLU) the sample is regarded Not Found for residual phosphatase, the activity originally measured is microbial 3. If the heated sample is more than 30% below unheated sample (mU/L or RLU), the sample contains milk phosphatase activity, either residual or Reactivated Phosphatase a. Magnesium acetate solution commercially available b. Or, prepared in laboratory 1. Dissolve 35.4 g of Mg acetate tetra-hydrate, Mg (C₂H₃O₂)₂*4H₂O in 25 mL deionized (DI) water, warming slightly to aid dissolution 2. Pour solution into 100 mL volumetric flask, rinse original container several times and add rinse to flask 3. After cooling to room temperature, make up to 100 mL (stable for 1 year at 0.0-4.5°C) c. Procedure 1. Label separate test tubes as "Blank" and "Test" 2. Add a 5.0 mL aliquot of sample (unheated, original sample prepared as in 14a) to each test tube 3. Add 0.1 mL DI water to the sample labeled "Blank", and 0.1 mL Mg acetate solution the sample labeled "Test" 4. Cap tubes, mix and heat both aliquots for 1 hour at 34±1°C 5. Remove samples from water bath and cool rapidly to 0.0 – 4.5°C in an ice bath 6. Dilute 1 mL of sample containing magnesium acetate (Test) with 5 mL (1:6 dilution) of negative control product (item 9), label tube as "Diluted Test" 		d.	Test	t heated sample and unheated sample (original sample) following item 14	
1. Controls test as specified in item 13		e.	Inter	rpretation	
 2. If heated and unheated sample have equal activity (±30%, mU/L or RLU) the sample is regarded Not Found for residual phosphatase, the activity originally measured is microbial 3. If the heated sample is more than 30% below unheated sample (mU/L or RLU), the sample contains milk phosphatase activity, either residual or Reactivated 16. Reactivated Phosphatase a. Magnesium acetate solution commercially available b. Or, prepared in laboratory 1. Dissolve 35.4 g of Mg acetate tetra-hydrate, Mg (C₂H₃O₂)_{2*}4H₂0 in 25 mL deionized (DI) water, warming slightly to aid dissolution 2. Pour solution into 100 mL volumetric flask, rinse original container several times and add rinse to flask 3. After cooling to room temperature, make up to 100 mL (stable for 1 year at 0.0-4.5°C) c. Procedure 1. Label separate test tubes as "Blank" and "Test" 2. Add a 5.0 mL aliquot of sample (unheated, original sample prepared as in 14a) to each test tube 3. Dilute 1 mL of sample containing magnesium acetate (Test) with 5 mL (1:6 dilution) of negative control product (item 9), label tube as "Diluted Test" 			1.	Dissolve 35.4 g of Mg acetate tetra-hydrate, Mg (C ₂ H ₃ O ₂) ₂ •4H ₂ 0 in 25 mL deionized (DI) water, warming slightly to aid dissolution	
 3. After cooling to room temperature, make up to 100 mL (stable for 1 year at 0.0-4.5°C) c. Procedure 1. Label separate test tubes as "Blank" and "Test" 2. Add a 5.0 mL aliquot of sample (unheated, original sample prepared as in 14a) to each test tube 3. Add 0.1 mL DI water to the sample labeled "Blank", and 0.1 mL Mg acetate solution to the sample labeled "Test" 4. Cap tubes, mix and heat both aliquots for 1 hour at 34±1°C 5. Remove samples from water bath and cool rapidly to 0.0 – 4.5°C in an ice bath 6. Dilute 1 mL of sample containing magnesium acetate (Test) with 5 mL (1:6 dilution) of negative control product (item 9), label tube as "Diluted Test" 			2.	Pour solution into 100 mL volumetric flask, rinse original container several times and add rinse to flask	
 c. Procedure			3.	After cooling to room temperature, make up to 100 mL (stable for 1 year at 0.0-4.5°C)	
 Label separate test tubes as "Blank" and "Test" Add a 5.0 mL aliquot of sample (unheated, original sample prepared as in 14a) to each test tube Add 0.1 mL DI water to the sample labeled "Blank", and 0.1 mL Mg acetate solution to the sample labeled "Test" Cap tubes, mix and heat both aliquots for 1 hour at 34±1°C Remove samples from water bath and cool rapidly to 0.0 – 4.5°C in an ice bath Dilute 1 mL of sample containing magnesium acetate (Test) with 5 mL (1:6 dilution) of negative control product (item 9), label tube as "Diluted Test" 		C.	Proc	cedure	
 Add a 5.0 mL aliquot of sample (unheated, original sample prepared as in 14a) to each test tube Add 0.1 mL DI water to the sample labeled "Blank", and 0.1 mL Mg acetate solution to the sample labeled "Test" Cap tubes, mix and heat both aliquots for 1 hour at 34±1°C Remove samples from water bath and cool rapidly to 0.0 – 4.5°C in an ice bath Dilute 1 mL of sample containing magnesium acetate (Test) with 5 mL (1:6 dilution) of negative control product (item 9), label tube as "Diluted Test" 			1.	Label separate test tubes as "Blank" and "Test"	
 3. Add 0.1 mL DI water to the sample labeled "Blank", and 0.1 mL Mg acetate solution to the sample labeled "Test" 4. Cap tubes, mix and heat both aliquots for 1 hour at 34±1°C 5. Remove samples from water bath and cool rapidly to 0.0 – 4.5°C in an ice bath 6. Dilute 1 mL of sample containing magnesium acetate (Test) with 5 mL (1:6 dilution) of negative control product (item 9), label tube as "Diluted Test" 			2.	Add a 5.0 mL aliquot of sample (unheated, original sample prepared as in 14a) to each test tube	
 4. Cap tubes, mix and heat both aliquots for 1 hour at 34±1°C			3.	Add 0.1 mL DI water to the sample labeled "Blank", and 0.1 mL Mg acetate solution to the sample labeled "Test"	
 5. Remove samples from water bath and cool rapidly to 0.0 – 4.5°C in an ice bath 6. Dilute 1 mL of sample containing magnesium acetate (Test) with 5 mL (1:6 dilution) of negative control product (item 9), label tube as "Diluted Test" 			4.	Cap tubes, mix and heat both aliquots for 1 hour at 34±1°C	
 Dilute 1 mL of sample containing magnesium acetate (Test) with 5 mL (1:6 dilution) of negative control product (item 9), label tube as "Diluted Test" 			5.	Remove samples from water bath and cool rapidly to $0.0 - 4.5^{\circ}$ C in an ice bath	
			6.	Dilute 1 mL of sample containing magnesium acetate (Test) with 5 mL (1:6 dilution) of negative control product (item 9), label tube as "Diluted Test"	

		7.	Test undiluted sample containing no magnesium acetate (Blank) and diluted sample containing magnesium acetate Diluted Test) for phosphatase activity following item 14	
	d.	Inte	rpretation	
		1.	If the diluted aliquot containing Mg acetate (Diluted Test) has equal (30%) or greater phosphatase activity than the undiluted aliquot containing no Mg (Blank), the sample is regarded as Not Found for residual phosphatase, and the phosphatase originally measured is of reactivated origin	
			Diluted w/Mg (Test) ≥ Undiluted (Blank) = Reactivated	
		2.	If the diluted aliquot Diluted Test) contains less (30% below or less) activity than the undiluted aliquot (Blank) the sample is considered Positive for residual phosphatase	
			Diluted w/Mg (Test) < Undiluted (Blank) = Residual	
		3.	A false-positive for residual phosphatase may also be obtained if a reactivatable sample has been allowed to stand at elevated temperatures (20°C) for periods of 1 hr or more before testing (SPC < 20,000/mL)
