APPENDIX N BULK MILK TANKER SCREENING TEST FORM

Neogen BetaStar Advanced Test for Tetracyclines (Raw Commingled Cow Milk) IMS #9-N2

[Unless otherwise stated all tolerances are ±5%]

GENERAL REQUIREMENTS

1.	See Appendix N General Requirements (App. N GR) items 1-8 & 15						
		SAMPLES					
2.	See App. N GR item 9						
		APPARATUS & REAGENTS					
3.	Equipment						
	a.	Neogen Corporation, Raptor® Integrated Analysis System (Manual available). Thermostatically controlled at 65±5°C					
		Serial Number:					
		Temperature checked daily on the screen and printout (day of use), records maintained (Printout acceptable for daily temperature check)					
		a. Incubator Temperature:					
		b. Annual temperature verification performed; records maintained					
		1. Date of last verification:					
	b.	Reader calibrators					
		1. Positive:					
		2. Negative:					
	C.	Pipettor - 400 μL and disposable tips (see App. N GR item 7)					
	d.	Or disposable 400 µL single-use poly-pipettes (screening only)					
4.	Tes	st Kits					
	a.	BetaStar Advanced Test for Tetracyclines Kit					
		Lot #: Exp. Date:					
		QC Date: By:					

5.	Sample and control agitation					
	a.	Mix milk sample(s)/control(s) 25 times in 7 sec with a 1 ft movement or vortex for 10 sec at maximum setting; use within 3 min (samples/controls must be in appropriate containers to allow the use of vortexing)				
6.	Rea	agent Stability and Preparation				
	a.	Test Kit including strips are received under ambient temperature				
	b.	-	os stored at 18 - 30°C (64 - 86°F), maintain no longer than manufacturer's ration date			
	C.	Neg	ative Control			
		Previously negative tested raw milk				
		 Milk can be screened (previously tested) by the testing location making and/or using the controls 				
		3. Negative control must result in a ratio of ≥1.15; maintain records				
			Sample ID: Date Tested:			
		Ratio:				
		4. Use within 72 hours when maintained at 0.0-4.5°C				
		5.	Or, aliquot within 24 hours and freeze at -15°C or colder in a non frost-free freezer or in an insulated foam container in a frost-free freezer; use within 2 months			
		Lab Prep. Date: Lab Exp. Date:				
			a. Thaw slowly in refrigerator or more rapidly in cold water. Mix well until sample is homogeneous			
			Do Not use if there is visible protein precipitation			
			b. Store at 0.0-4.5°C and use within 48 hours. Do not refreeze			
		6.	Day of use must result in a ratio of ≥1.15; maintain records			
		Do Not proceed if out of range				

d.	 d. Positive Control - Manufacturer supplied, maintain no longer than manufacturer's expiration date 					
	1.	BetaStar Advanced for Tetracyclines Positive Control				
		a. Lyophilized 300.0 ±30.0 ppb Oxytetracycline				
		Lot #: Exp. Date:				
	2.	Store according to label instructions				
	3.	Reconstitute with 1.0 mL of fresh or previously frozen previously screened tetracycline negative raw commingled cow milk				
	4.	Positive control must produce a ratio of ≤ 0.85; maintain records				
		Ratio:				
	5.	Store reconstituted positive control at 0.0-4.5°C for no more than 48 hours				
		Lab Prep. Date: Lab Exp. Date:				
	6.	Or, aliquot within 24 hours and freeze at -15°C or colder in a non frost-free freezer or in an insulated foam container in a frost-free freezer; use within 2 months. Do Not freeze positive control if it was made with previously frozen negative control				
		Lab Prep. Date: Lab Exp. Date:				
		a Thaw slowly in refrigerator or more rapidly in cold water. Mix well until sample is homogeneous				
		Do Not use if there is visible protein precipitation				
		b. Store at 0.0-4.5°C and use within 48 hours; do not refreeze				
	7.	Day of use must produce a ratio of ≤0.85; maintain records				
		TECHNIQUE				
Dail	у Ре	erformance and Operation Check				
a.	See	e App. N GR items 10.b-d				
b.	Rap	otor® Integrated Analysis System				
	1.	At Raptor® start-up, calibration of camera and LED occurs automatically when instrument is turned on				

7.

			mes	ssage will prompt the u	iser, "Calibration uns	successful. Contact Neogen." _	
		3. Annual calibration defines x and y offsets for the Raptor system				he Raptor system _	
			a.	•	ns performed within I	uired every 365 days. Verify ast 365 days. Please see	
				Date of last calibration	on:	-	
		4.	Dail	ly reader check calibra	tion	-	
			a.	The reader check ca three ports in the Ra	•	rformed daily in each of	
			b.	There are three calib positive or all negative		nin each cartridge, all	
			C.	Both positive and neg the limits specified ≤0 maintain records		rtridges must read within ≥1.15 for negative;	
			d.	Positive Calibrator R	atios: (Specification	≤0.85)	
				Port 1:	Port 2:	Port 3:	
			e.	Negative Calibrator F	Ratios: (Specification	າ ≥1.15) _	
				Port 1:	Port 2:	Port 3:	
		5.		eader check calibration ceeding	s are out of range, o	contact Neogen before	
3.	Tes	t Pro	cedu	ure		-	
	a.	a. Make sure hands are clean and dry before handling test kits					
	b.	Set out required number of cartridges and place them in a dry labeled container at room temperature, or take out cartridges as needed					
		1.	Cartridges that have been removed from the protective storage container must be kept clean and dry				
		2.		y cartridges removed fr ting day must be discar		in unused at the end of the	
	C.	 Cartridges are pre-loaded with one test strip. Up to two more test strips may be loaded into the cartridge. One cartridge, loaded with up to three test strips, can be used to test one milk sample 					

If the calibration is unsuccessful, the reader will not operate. A warning

2.

d.	inserted into the port, the port will automatically begin to adjust to the proper temperature						
e.	The bar code on the test device will be read. If the QR (quick response) code for the lot of strips has not been entered into the system, the bar code reader in the front of the reader will turn on automatically. Scan the QR code found on the container storing the test strips						
f.	Instrument will prompt user for the milk sample ID. Scan or enter the sample ID at this time						
g.	Mix	milk	sample(s)/control(s) (See item 5.a)				
h.	The user will be prompted to add the milk sample when the port reaches 65.0 ± 5.0 °C. Do Not add milk sample until prompted to do so						
i.	Add	400	uL of mixed sample/control into the back of the cartridge				
	1.	Using Pipettor (item 3.c) with a new tip for each sample/control and holding pipettor vertically draw up 400 µL avoiding foam and bubbles					
		a.	Remove tip from liquid				
		b.	While holding the pipettor vertically, expel test portion into cartridge				
		C.	After sample is delivered into cartridge, eject pipette tip into the back of the cartridge to prevent double loading of the same sample or loading a second sample into the same cartridge				
	2.	FOR SCREENING ONLY - Using a new manufacturer provided single-use 400 μL poly-pipet (item 3d.) for each sample/control					
		a.	Squeeze top bulb while holding single-use pipet vertically and draw up test portion avoiding foam and bubbles. Insure that pipet shaft is completely full and sample overflows into the bottom half of the overflow reservoir				
		b.	Remove tip from liquid				
		C.	While holding the single-use pipet vertically, expel test portion slowly into the back of the cartridge. Excess portion should remain in reservoir				
		d.	After loading milk sample into the cartridge, leave the used pipette in the back of the cartridge. This will prevent double loading the same sample or loading a second sample into the same cartridge				
j.	Press "Next" after sample has been added. The unit will begin the 5 minute incubation after the system identifies the fluid front of the sample wicking up the device						

	k.	After 5 minutes the result will be displayed on the screen, an audible tone will sound, and the test result will automatically print			
	l.	Remove cartridge containing test strip(s) from the reader and discard the entire cartridge			
9.	Inte	Interpretation with Reader			
	a.	If there is a ratio of ≥1.00 on the reader, sample is a Negative (NF)			
	b.	If there is a ratio of <1.00 on the reader, sample is an Initial Positive			
10.	Verification of Initial Positive Tanker Samples (see App. N GR item 11)				
11.	Confirmation of Presumptive Positive Tanker Samples (see App. N GR item 12) [Only in an accredited laboratory or by a CIS]				
	a.	If performing confirmation on an equivalent test follow confirmation procedure for that test (refer to M-a-85 current revision for a listing of test kits to assure equivalence)			
12.	Traceback of Producer(s) on a Confirmed Positive Tanker (see App. N GR item 13) [Only in an accredited laboratory or by a CIS (refer to M-a-85 current revision for a listing of test kits to assure equivalence)]				
13.	Re-instatement of Producer(s) [Only in an accredited laboratory or by a CIS (refer to M-a-85 current revision for a listing of test kits to assure equivalence)]				
14.	Reporting (see App. N GR item 14)
